Damansara Fertility Centre (DFC) is a one-stop comprehensive fertility management centre providing the entire spectrum of technologically advanced treatment options to couples trying to conceive. DFC was established in 1994. The headquarters is in Selangor and there are branches in Kuala Lumpur and Johor Bahru (10 minutes' drive from Singapore). The 11 years old centre is now the single largest Fertility Centre in Malaysia in terms of Patient base, IVF cycles and test-tube babies taken home.

DFC is now responsible for about 1/3 of all test-tube babies ever produced in Malaysia.

DFC's IVF success rates are comparable to top fertility centres in the United States of America and United Kingdom. The centre's list of accomplishments include producing Malaysia and Singapore's first IVF surrogate baby, Malaysia's first Frozen Embryo baby, Malaysia's first Blastocyst babies & Malaysia and Singapore's first Pre-implantation Genetic Diagnosis (PGD) pregnancies.
